Dear Hiring Manager

I am Azmi Rehman Khan, currently in my fourth semester of Autonomous Vehicle Engineering and officially transitioning to a Bachelor of Science in Applied Informatics for the upcoming Winter Semester. I am writing to apply for the **Working Student Reinsurance Analytics (m/f/d)** position. I possess a genuine **Interest in reinsurance** and am highly eager to embrace the continuous **Learning** required to master reinsurance concepts, processes, and tools to contribute effectively to your team.

My background in complex software architecture and independent data projects equips me with the strong **Analytical Skills** needed for this role. I recently developed a full-stack "F1 Race Analyzer" that ingests and processes massive streams of live telemetry into interactive dashboards. This quantitative work proves I am comfortable working with numbers and possess a **keen eye for detail**. Furthermore, this project solidified my **Technical Proficiency**; alongside Python and SQL, I am highly proficient with data analysis tools such as **excel**. I am well-prepared to **assist in analysing reinsurance data to help identify trends and patterns**, including working seamlessly with **larger excel based data sets and preparing reports**.

I also bring a strong **Openness to creative and innovative solutions**, as well as a **passion for working with forward-thinking technologies such as artificial intelligence or internal ChatGPT**. I recently independently architected a custom Retrieval-Augmented Generation (RAG) pipeline using the Gemini API and LangChain to parse and interrogate dense technical documents. Building decoupled AI systems requires rigorous technical writing, preparing me perfectly to assist in **Documentation by maintaining and updating documentation related to the processes within the Portfolio Analytics team**. I am highly proactive and ready to provide comprehensive **Project support** for any **data driven request**.

I excel at **Team work** and look forward to **working collaboratively with colleagues across different locations**. I am based locally in Munich and highly interested in utilizing your flexible, hybrid "New Work" model. I would welcome the opportunity to discuss my analytical projects with you in an interview.

Kind Regards,

Azmi Rehman Khan
Munich, Germany
