1.06.2025

Dear Hiring Manager

I'm Azmi Rehman Khan, an Autonomous Vehicle Engineering student—a highly quantitative and **comparable course of study** to **mathematics, physics, computer science**—at Technische Hochschule Ingolstadt. I'm applying for the Working Student in the field of **Customer Analytics - Data Science (m/f/d)** role at Allianz in Unterföhring. Building **reporting and analysis dashboards** and using raw data to derive strategic areas of action is exactly the kind of data engineering I want to be doing full time.

My "F1 Race Analyzer" project is the closest parallel to what the CCO team does. I built an end-to-end Python pipeline processing live telemetry data, engineering robust data handling capabilities, and building interactive Streamlit dashboards to visualize complex metrics. That's the same loop this role runs: take messy data, run **code-based recalculation** using **Python** to independently verify correctness, and surface it in a way that helps stakeholders easily **analyze customer data**. My "Race Strategy AI" system pushed further into **modern data platforms** and **cloud data architectures**, utilizing RAG pipelines and FastAPI to ensure strict **data quality** and context-aware querying. While I haven't used **Power BI** or Infonea directly, my deep experience with Python-based **visualization or dashboard tools** (like Plotly and Pandas) allows me to easily pivot, and I possess the **basic knowledge of working with databases (e.g. SQL)** necessary to extract the right metrics.

Allianz establishing a CCO role to act as the active and independent voice of the customers is a genuinely impactful mission. I have a **strong affinity for data and digital tools** and a **quick grasp of things**, allowing me to work **precisely, even when time is tight**—a trait I solidified during high-volume logistics work. I can **present complex issues in a simple and understandable way** using **MS Office, especially PowerPoint and Excel**. I haven't directly implemented a **deletion concept** before, but I understand **data protection, and information security** basics conceptually and I get up to speed on new technical domains fast.

I am based locally in Munich and am highly interested in the hybrid setup. My English is C1 and my German is A2. I'd be glad to discuss further in an interview or by phone whenever works for your team.

Kind Regards,

Azmi Rehman Khan
Munich, Germany
